

ABSTRACT OF THE DISCLOSURE**ORIGIN DEVICE BASED CALLER IDENTIFICATION**

5 A method, system, and program for origin device initiated caller identification are provided. A voice utterance is detected at an origin device. A caller identity associated with the voice utterance is identified at the origin device, such that the caller identity is transmittable as an authenticated identity of the caller for a call. An intermediary device receives the caller identity with a call request and specifies services available to the caller according to a caller service profile associated with the caller identity.
